POST-OFFICE BUILDING, BOSTON.

A red flag with a black centre indicates that the storm is expected to be severe.

The pennants displayed with the flags indicate the direction of the wind; red, easterly (from northeast to south); white, westerly (from southwest to north). The pennant above the flag indicates that the wind is expected to blow from the northerly quadrant; below, from the southerly quadrant.

The Hurricane Signal consists of two red flags with black centers, displayed one above the other. It is used to announce the expected approach of tropical hurricanes, and also of those extremely severe and dangerous storms which occasionally move across the great lakes and the Northern Atlantic Coast. The flags are the same as the one now used for the distinctive signal, the pennants being omitted.

The Information Signal consists of a red pennant similar to the direction pennants, and when displayed alone indicates that the local observer has received information from the central office of a storm covering a limited area, dangerous only for vessels about to sail to certain points. The signal is intended to be a notification to shipmasters that valuable information will be given them upon application to the local observer.

By night a red light will indicate easterly winds and a white light above a red light will indicate westerly winds.

LEVI L. WILLCUTT, Pres't

THE REECE BUTTON HOLE MACHINE CO.

—MANUFACTURERS OF—

BUTTON HOLE MACHINERY

THE REECE BUTTON HOLE MACHINE

For Cutting and Working Button Holes in Boots and Shoes, Clothing, or any fabric requiring a Worked Button Hole.

On Boots and Shoes it procures a saving of from **20** to **40** cents per case. A single operator can cut and make from **5000** to **7000** button holes per day.

On Clothing its capacity is twice that of any other button hole machine, and as this is the only machine which makes an eyelet button hole without necessitating the folding and turning of the garment at each button hole, this in connection with the automatic cutter makes it a far superior machine for this class of work.

The Reece Button Hole Finishing Machine

Saves from **40** to **50** cents a case. Capacity is from **15** to **18** cases per day. Its work is far superior to that done by hand.

This machine collects the thrum ends and stay cord, and stitches them to the inside of button hole pieces, without showing through on the right side, and without folding the work, thereby avoiding any marking or creasing.

The Reece Button Hole Barring Machine

Saves from **20** to **30** cents per case on barred button holes. Its capacity is from 10 to 15 cases per day.

This is the only machine in the market that makes a perfect hand bar, and for uniformity and strength it far surpasses hand work.

Patterns for Cast Gears made of Wood or Iron. Particular attention given to Cutting Finished Work. Also Drawings for Gear Work made to order. A specialty of Cutting Wood or Iron Patterns for Cast Gears and Cutting Cog or Mill Gears, from one to five inch circular pitch, and eight feet in diameter.

13 CYPRESS ST.,

WORCESTER, - MASS.

THIS SYSTEM consists of a 5-8 inch solid steel rod, supported in suitable hangers adapted to different style of houses. The upright lifting bar or rack attaches to the ventilators and intersects with the cog wheel in which it travels when raising and lowering the ventilators. On the left side, and passing over the back of rack, is the Guide, used to prevent the teeth of the rack from separating from those of the cog wheel. This is held in position by the collar at the left. It is so constructed that it cannot bind on the rack nor separate from its position. The SPRING is the ALL IMPORTANT in the Ormsby System; it is made of the very best grade of STEEL.

This System is adapted to Greenhouses, Factories, Machine Shops, Foundries, Churches, Halls, and all buildings where monitor roofs or continuous skylights are used. They are made to operate windows in various forms, especially where the crank rod cannot extend direct downward. The rod may be carried at any angle or any part of the building desired.

At Hyde Park, Mass., the new buildings of the Becker-Brainard Milling Machine Company are fitted with this System.

BRIDGEPORT, CONN, June 16, 1897.

Mr. ORMSBY:

Dear Sir,—To express my appreciation of your ventilating system would be to say: "If I had twenty more greenhouses to build besides the three I have almost finished I would have them all ventilated with your system, even if a number of those in the market would put theirs in for nothing." Having had three years' experience with it, and now having 2000 feet of your ventilating apparatus, which we consider the lightest, quickest, and the best in the market, we feel, in recommending it to everyone, that they will not be running any risk in buying it, and that they will find in using it that it will prove in every respect satisfactory. Yours, JAMES E. BEACH.

BOSTON, MASS., March 3, 1899.

Mr. E. A. ORMSBY:

Dear Sir,—I have used your ventilating system in seven of the largest greenhouses on this place for a number of years back. I take great pleasure in stating that it has always worked to my entire and perfect satisfaction, that on no single occasion have I had to find any fault with it, and I have no hesitation in recommending it as a first class ventilating system. Respectfully, D. J. MURPHY, Foreman for Wm. E. Doyle, Florist, 43 Tremont St.
